SUMMARY

Senior Technical Program Manager with 15+ years delivering AI/ML systems, data platforms, production reliability, and risk technology programs. Recently worked on Meta Ads Ranking ML systems, driving model launch readiness, offline evaluation reliability, offline-to-online debugging, roadmap execution, and production issue mitigation. Known for creating structure in ambiguity, aligning engineering, product, data science, and platform teams, and connecting technical delivery to measurable business impact.

SKILLS

- **AI / ML:** ML Productionization & Lifecycle Management, Ranking & Relevance System, ML Launch Readiness, ML Evaluation Platforms, Offline-to-Online Debugging, AI/ML Infrastructure.
- **AI Tooling & Automation:** GenAI/LLM Workflow Automation, API Integration, Agentic Workflows, Self-Service Dashboards, Program Management Automation
- **Data & Platform:** Data Platforms, ETL/Data Pipelines, Production Reliability, Incident Triage, AWS (EC2, S3, RDS, Lambda)
- **Program Leadership:** Cross-functional Leadership, Roadmap Planning, OKR & KPI Governance, Stakeholder Management
- **Methods & Tools:** Agile/Scrum/Kanban, SQL, Python, Jupyter Notebook, Tableau, Power BI, Jira, Confluence, Unix/Shell Scripting

EXPERIENCE

Meta, Technical Program Manager, Ads Ranking ML Systems

Sunnyvale, CA | Feb 2026 – Present

- Directed AI/ML evaluation, launch-readiness, and developer productivity programs for Meta Ads Ranking systems, driving \$125M in incremental revenue by improving model iteration velocity and production confidence.
- Drove H1 reliability execution for Ads Ranking ML offline evaluation, improving eval platform reliability from 80% to 84% across launches driving ~\$32.5M in incremental revenue.
- Led model launch decision-quality execution for Ads Ranking model launches tied to ~\$27.5M in incremental revenue, improving GDR from 70% to 75.5% and incorporating Recall beyond Normalized Entropy into the H2 strategy.
- Led offline-to-online debugging and mitigation programs, reducing mean time to mitigation (MTTM) from 22 to 10.8 days; each day of improvement represented ~\$23.75M in incremental revenue impact.
- Drove adoption of Unified Eval, feature inconsistency checks, and O2O debugging assistance across 200+ Ads models to help machine learning engineers detect launch risks earlier and reduce production incidents.
- Led H1 execution and next-half roadmap planning across 50+ stakeholders and six Ads product groups, synthesizing CSAT feedback and incidents into coherent roadmap narratives that secured top prioritization votes.
- Built Claude-powered automation for WBR report creation, incident tracking, and GSD updates, reducing manual TPM overhead; built self-service dashboards improving leadership visibility into roadmap execution, reliability trends, and launch risks; published AI tooling guide featured in the AI4P × TPM digest.

Biocharlife, Head of Data Integrity & Technology | Technical Program Manager, Data Systems

Remote | Dec 2023 – Mar 2025

- Led MRV system implementation across four countries, coordinating 100+ field, operations, audit, and technical stakeholders to support delivery of 10,000+ CSI-verified biochar carbon credits, representing ~\$1.5M in market value.
- Designed and implemented end-to-end data governance framework, defining data standards, field collection rules, and verification thresholds to meet international carbon credit certification requirements, covering the full pipeline from field data collection through analysis, verification, and credit generation across four countries
- Implemented CLIP-based duplicate-image detection across 120K+ field images from 15K+ MRV records, delivering automated fraud-screening capability at an estimated API/compute cost under ~\$1K while supporting verification quality for 10,000+ biochar carbon credits.
- Built Power BI and Airtable dashboards to track ESG compliance, field operations, verification status, and country-level KPIs, reducing median review time from 10 days to 3 days, approximately 70% faster.
- Built AWS and Python automation for data backup, reliability monitoring, and operational reporting while standardizing verification workflows across field teams and country programs.

ElevaSalud, Co-founder, Technical Project & Product Manager, Digital Health Platform

Remote | Dec 2022 – Nov 2023

- Led end-to-end product delivery for a WhatsApp-based digital health assistant, scaling the MVP to 5,000+ users and improving access to appointment scheduling, onboarding, and patient communication workflows.
- Coordinated engineering, design, health workers, and operations across Twilio, PostgreSQL, React, and WhatsApp integrations to launch the MVP on time and support reliable user-facing health workflows.
- Built program operating structure from scratch including Agile delivery, sprint planning, dependency tracking, and stakeholder reporting, reducing development cycles by 20% and improving usability by 25% through structured prioritization and rapid feedback loops
- Partnered directly with health workers and end users to refine onboarding, appointment scheduling, reminders, and communication flows, translating frontline feedback into product requirements and release priorities.

JP Morgan Chase, Technical Business Analyst, Risk Technology & Regulatory Reporting

NYC | Jun 2014 – May 2018

- Delivered Liquidity Risk, Basel III, and CCAR reporting initiatives across three business units, translating regulatory requirements into FRDs, user stories, acceptance criteria, and delivery plans.
- Partnered with ETL/data warehouse teams on central risk data transformations, built Tableau dashboards for exposure/liquidity/regulatory metrics, and automated PL/SQL/VBA reconciliations to improve data validation.

UBS, QA Engineer, Risk Technology & Data Validation

NYC/JC | Feb 2012 – Jun 2014

- Led QA execution and release readiness for capital markets risk systems, managing global test planning, defect tracking, and standardized documentation across distributed teams.
- Engineered automated regression testing workflows using Shell scripts and Excel VBA, reducing manual testing effort by 25%, while optimizing Oracle PL/SQL queries to ensure the consistency of downstream data pipelines.

Apple, Production Support Engineer, iTunes & MobileMe

India | Oct 2008 – Feb 2011

- Supported global iTunes and MobileMe systems, resolving high-priority incidents and analyzing system health to minimize service disruption.
- Engineered Shell and Perl automation for server monitoring and recurring operational tasks, improving disk space utilization by up to 30%.

EDUCATION & CERTIFICATIONS

Bachelor of Engineering, Computer Engineering, India • PMP® • CSPO®
