SUMMARY

Senior Technical Program Manager with 15+ years of experience leading AI/ML, Ads Ranking, data platform, production reliability, and risk technology programs. Most recently led cross-functional Ads Ranking ML programs at Meta, driving roadmap execution, launch readiness, platform reliability, developer productivity, and production issue resolution. Known for transforming complex technical workflows and program operations through GenAI/LLM-powered automation, establishing data governance standards, driving adoption, and aligning Engineering, Product, Data Science, Research, and business teams to deliver measurable impact.

SKILLS

- **AI/ML:** Ads Ranking & Relevance Systems, Machine Learning SDLC (MLSDLC), ML Evaluation Platforms, Offline-to-Online (O2O) Debugging, AI/ML Infrastructure, Production Reliability.
 - **Program Leadership:** End-to-End SDLC, Portfolio Planning and Execution, Roadmap Planning, Dependency and Risk Management, Launch Readiness, Executive Reporting, OKR and KPI Governance, Cross-Functional Leadership
 - **AI Tooling & Automation:** Agentic Engineering Tools & Guardrails, GenAI/LLM Workflow Automation, API Integration, Agentic Workflows, Self-Service Dashboards, Program Management Automation.
 - **Data & Platform:** Data Platforms, ETL/Data Pipelines, Production Reliability, Incident Triage, AWS (EC2, S3, RDS, Lambda).
 - **Methods & Tools:** Agile/Scrum/Kanban, SQL, Python, Jupyter Notebook, Tableau, Power BI, Jira, Confluence, Perl, Unix/Shell Scripting.
-

EXPERIENCE

Meta, Technical Program Manager, Ads Ranking ML Systems

Sunnyvale, CA | Feb 2026 – Jul 2026

- Led concurrent programs that improved machine learning development lifecycle (MLSDLC) efficiency for Ads Ranking systems, spanning evaluation reliability, launch decision quality, offline-to-production debugging, and ML developer tooling from experimentation through production release gates.
- Drove H1 reliability execution for the offline model-evaluation platform, improving evaluation reliability from 80% to 84% and increasing confidence in results used during model iteration and launch decisions.
- Improved model launch decision quality from 70% to 75.5% by aligning Product, Engineering, and Data Science teams on shared evaluation criteria and incorporating recall alongside normalized entropy into the go/no-go launch decision framework.
- Led complex offline-to-online (O2O) debugging and performance mitigation programs, partnering tightly with modeling, infrastructure, and research teams to reduce the average time to resolve model-performance discrepancies from 22 days to 10.8 days.
- Drove the adoption of standardized evaluation frameworks and feature-consistency checks across hundreds of production Ads Ranking models, enabling ML teams to catch launch risks early and prevent production regressions.
- Led roadmap planning across 50+ stakeholders and six Ads product groups, synthesizing customer feedback, CSAT results, reliability trends, and production incidents into roadmap proposals that secured top prioritization votes.
- Built GenAI/LLM-powered agentic workflows for weekly business reporting, incident tracking, and program updates, reducing manual TPM overhead and improving the consistency and timeliness of leadership communication.
- Developed self-service dashboards that improved leadership visibility into roadmap execution, reliability trends, dependencies, and model-launch risks. Published an AI tooling guide featured in a Meta-wide AI and TPM digest.

Biocharlife, Head of Data Integrity & Technology | Technical Program Manager, Data Systems

Remote | Dec 2023 – Mar 2025

- Led implementation of a monitoring, reporting, and verification (MRV) data platform across four countries, built to meet CSI Global Artisan C-Sink requirements, an international standard for verifying carbon credits. Coordinated 100+ field, operations, audit, compliance, and technical stakeholders to support delivery of 10,000+ verified credits worth approximately \$1.5M.
- Directed end-to-end data systems and governance programs spanning field data collection, data pipelines, quality validation, analysis, external verification, and carbon-credit generation. Defined data standards, ownership, collection rules, and verification thresholds required to meet international certification requirements.
- Managed cross-country program plans, technical and operational dependencies, audit readiness, risks, and stakeholder communication across field teams, external auditors, certification partners, and engineering teams.
- Led implementation of CLIP-based duplicate-image detection across 120,000+ field images and 15,000+ MRV records, introducing automated fraud and data-integrity screening at an estimated API and compute cost below \$1K.
- Built Power BI and Airtable dashboards to track compliance, field operations, verification status, data-quality risks, and country-level KPIs, reducing median record-review time from 10 days to 3 days.
- Built AWS and Python automation for data backup, reliability monitoring, validation, and operational reporting, while standardizing verification workflows across four country programs.

ElevarSalud, Co-founder, Technical Project & Product Manager, Digital Health Platform

Remote | Dec 2022 – Nov 2023

- Led end-to-end product delivery for a WhatsApp-based digital health assistant, scaling the MVP to 5,000+ users and improving access to appointment scheduling, onboarding, and patient communication workflows.
- Coordinated engineering, design, health workers, and operations across Twilio, PostgreSQL, React, and WhatsApp integrations to launch the MVP on time and support reliable user-facing health workflows.
- Built program operating structure from scratch including Agile delivery, sprint planning, dependency tracking, and stakeholder reporting, reducing development cycles by 20% and improving usability by 25% through structured prioritization and rapid feedback loops.
- Partnered directly with health workers and end users to refine onboarding, appointment scheduling, reminders, and communication flows, translating frontline feedback into product requirements and release priorities.

JP Morgan Chase, Technical Business Analyst, Risk Technology & Regulatory Reporting

NYC | Jun 2014 – May 2018

- Delivered Liquidity Risk, Basel III, and CCAR reporting initiatives across three business units, translating regulatory requirements into FRDs, user stories, acceptance criteria, and delivery plans.
- Partnered with ETL/data warehouse teams on central risk data transformations, built Tableau dashboards for exposure/liquidity/regulatory metrics, and automated PL/SQL/VBA reconciliations to improve data validation.

UBS, QA Engineer, Risk Technology & Data Validation

NYC/JC | Feb 2012 – Jun 2014

- Led QA execution and release readiness for capital markets risk systems, managing global test planning, defect tracking, and standardized documentation across distributed teams.
- Engineered automated regression testing workflows using Shell scripts and Excel VBA, reducing manual testing effort by 25%, while optimizing Oracle PL/SQL queries to ensure the consistency of downstream data pipelines.

Apple, Production Support Engineer, iTunes & MobileMe

India | Oct 2008 – Feb 2011

- Supported global iTunes and MobileMe systems, resolving high-priority incidents and analyzing system health to minimize service disruption.
- Engineered Shell and Perl automation for server monitoring and recurring operational tasks, improving disk space utilization by up to 30%.

EDUCATION & CERTIFICATIONS

Bachelor of Engineering, Computer Engineering, India • PMP® • CSPO®
