SUMMARY

Technical product and program leader with 15+ years of experience leading complex technical initiatives across AI/ML systems, data platforms, risk technology, and production reliability. Recently worked on Ads Ranking ML systems at Meta, focused on model launch readiness, offline evaluation reliability, offline-to-online debugging, roadmap execution, and production issue mitigation. Known for creating structure in ambiguous technical environments, aligning engineering, product, and platform teams, translating customer pain points into roadmap priorities, and connecting technical delivery to business impact.

SKILLS

- **Technical Program Management:** AI/ML programs, ML productionization, platform programs, roadmap planning, milestone governance, OKRs, risk/blocker management, dependency tracking, executive updates, WBRs, stakeholder alignment
- **AI Tooling & Automation:** Claude Code, Claude Skills, MyClaw, Manus, AI coding assistants, agentic workflows, second-brain setup, automation scripts, status extraction automation, workflow optimization
- **Data Systems & Analytics:** SQL, Presto, PLSQL, ETL/DWH, Python, data pipelines, Tableau, Power BI, Airtable, operational dashboards, KPI tracking, customer success metrics
- **Cloud & Infrastructure:** AWS, S3, EC2, Lambda, Unix systems, server monitoring, log analysis, infrastructure automation, CI/CD concepts
- **Compliance & Risk:** Regulatory reporting, Basel III, CCAR, ESG/MRV systems, audit-ready workflows, CSI-certified carbon credit verification
- **Tools:** Jira, Confluence, Asana, ServiceNow, Notion, Figma, Git, HP Quality Center, Excel VBA, Shell scripting

PROFESSIONAL EXPERIENCE

Meta – *Technical Program Manager, Ads Ranking ML System* Sunnyvale, CA | Feb 2026 – Present

- **ML Model Launch & Production Readiness:** Led cross-functional programs for Ads Ranking ML systems, partnering with engineering, product, data science, and platform teams to move ranking models from offline evaluation to reliable online launch across evaluation reliability, debugging, launch readiness, and issue mitigation.
- **Customer Discovery & Roadmap Prioritization:** Led weekly engagement with internal Ads product-group customers, including Instagram, Business Messaging, and model platform teams, to understand evaluation/debugging pain points, track H1 asks, refresh goals, and shape H2 roadmap priorities.
- **XFN Partnership & Roadmap Influence:** Translated customer pain points into prioritization docs, OKRs, and roadmap narratives that helped the team secure the **highest vote count across competing investment areas**.
- **Program Management & Operating Rhythm:** Created operating structure across ML evaluation and debugging workstreams, including milestone tracking, OKR alignment, WBR updates, dashboards, customer success metrics, risk/blocker management, roadmap refreshes, tradeoff discussions and leadership reporting.
- **ML Launch Decision Quality:** Drove execution against an increased **Good Decision Rate target from 70% to 75.5%**, connecting offline go/no-go recommendations to post-launch ads quality and incremental revenue outcomes.
- **Offline Evaluation Platform Reliability:** Drove execution for offline evaluation platform reliability used in Ads Ranking model launch decisions, aligning engineering owners, tracking half-to-date reliability improvement from **80% to 86%**, and creating failure-category metrics to separate platform, user-side, capacity, and downstream system failures.
- **ML Debugging & Issue Mitigation:** Automated offline-to-online issue tracking by scanning incident tickets, identifying relevant model debugging issues, updating mitigation trackers, summarizing resolution status, and calculating MTTM; partnered with engineering on white-glove support, supporting MTTM improvement from **22 days to 10.8 days**.
- **Governance & AI Tooling:** Drove cross-org accountability for evaluation configuration and metric definition quality across high-priority, revenue-relevant Ads Ranking models; built automation to reduce reporting burden on technical leads and published an internal AI tooling guide featured in the AI4P x TPM digest.

BiocharLife – *Technical Program Manager* Remote | Dec 2023 – Mar 2025

- Led MRV system implementation across four countries, leading 100+ team members to deliver 10,000+ CSI-verified carbon credits, meeting international standards.

- Integrated OpenAI APIs for automated trench measurement and image validation, reducing verification errors by 15%.
- Designed and implemented Power BI and Airtable dashboards that integrated ESG compliance data with operational KPIs, enabling FP&A-style performance tracking across four countries and reducing median review time from 10 days to 3 (~70% faster).
- Managed Agile workflows, coordinating compliance tracking and certification for distributed teams.
- Engineered AWS/Python automation for data backup and reliability monitoring.
- Standardized verification protocols and created dashboards for weekly reviews, improving reporting efficiency and decision-making speed

ElevarSalud – Project & Product Manager (Co-founder)

Remote | Dec 2022 – Nov 2023

- Spearheaded product lifecycle for a WhatsApp-based digital health assistant, achieving 5,000+ user adoption with equity-based compensation.
- Coordinated engineering, design, health workers, and operations across Twilio, PostgreSQL, React, and WhatsApp-based workflows to launch the MVP on time.
- Ran Agile sprints in Jira and Monday.com, reducing development cycles by 20% and improving usability by 25%.
- Partnered directly with health workers and users to refine onboarding, appointment, and communication flows.

JP Morgan Chase & Co. – Business Analyst

New York, NY | Jun 2014 – May 2018

- Delivered Liquidity Risk Infrastructure, CCEL, Basel III, and CCAR reporting initiatives across three business units, translating regulatory requirements into FRDs, user stories, acceptance criteria, and delivery plans.
- Partnered with ETL and data warehouse teams to define transformations into central risk data platforms, improving reliability of liquidity, exposure, credit limit, and regulatory reporting data.
- Built Tableau dashboards for portfolio exposure, credit limits, liquidity risk, and regulatory metrics, improving visibility for risk, finance, and technology stakeholders.
- Managed backlog, sprint tracking, dependencies, defects, and stakeholder updates in Jira to support on-time delivery of risk and compliance systems.
- Automated reconciliations with PL/SQL and VBA, reducing manual effort for liquidity and exposure data.

UBS – QA Engineer, Risk & Technology

New York, NY | Feb 2012 – Jun 2014

- Led QA for capital markets risk systems, validating data pipelines, VaR calculations, and risk reporting outputs across global teams and multiple time zones.
- Optimized PL/SQL queries in Oracle to validate risk data consistency, investigate discrepancies, and improve confidence in downstream VaR and regulatory reporting.
- Automated regression testing and data validation workflows using Excel VBA and Shell scripts, reducing manual testing effort by 25%.
- Managed test planning, defect tracking, and release readiness in HP Quality Center while mentoring junior QA engineers and standardizing testing documentation.

Apple – Production Support Engineer

India | Oct 2008 – Feb 2011

- Supported iTunes and MobileMe production infrastructure, resolving high-priority incidents, monitoring system health, analyzing logs, and coordinating issue resolution to minimize service disruption.
- Built Shell and Perl automation for server monitoring, disk-space checks, and recurring operational tasks, improving disk space utilization by **20–30%** and reducing manual support effort

Sabbatical & Independent Projects

Global | Jan 2019 – Oct 2022

- Took a planned sabbatical for global travel, personal development, and independent projects before returning to product and program leadership.
- Led volunteer-driven infrastructure initiatives, coordinating 50+ team members, managing \$50K+ budgets, and building WhatsApp/Airtable workflows that reduced onboarding time by 30%.
